'Insular biogeography  
Wikipedia

November 16th, 2019 -  
Insular biogeography or island biogeography is a field within biogeography that examines the factors that affect the species richness and diversification of isolated natural communities The theory was originally developed to explain the pattern of the species-area relationship occurring in oceanic islands''Historical biogeography A review of its basic concepts

December 24th, 2019 - For example ecological biogeography is concerned about functional groups of species and environmental constraints whereas historical biogeography focuses on taxonomic groups and historical biogeographic events Crisci et al 2006 Historical biogeography includes data from subjects as geology geography and biology to meet its aim''**WHAT IS BIOGEOGRAPHY**

---

---

Biogeography is the study of the distribution of plants and animals on the earth's surface and the historical ecological and human factors responsible. Generally, it is concerned with fundamental processes of evolution, extinction, and dispersal. It asks such questions as: Why are placental mammals dominant in Eurasia and North America?
